

Microsoft Technology training

Microsoft has implemented different certifications depending on your job function. If you are new to technology, you might want to start by exploring our specialist certifications. Seasoned IT professionals and developers should consider advanced Professional or Master Series certifications.

Microsoft certifications are as follows:

Specialist Series

The Microsoft Certified Technology Specialist (MCTS) series of certification demonstrates in-depth knowledge of a key Microsoft product or technology, validating your ability to implement, build, troubleshoot and debug a particular Microsoft technology, such as, Windows Server, Microsoft .NET Framework or Microsoft SQL Server. Choose from more than 30 certifications, with more being added as new technologies are introduced.

Earning an MCTS certification typically requires that you successfully pass one to three exams. Contact us for more info: Tel: 416- 483 – 3567 or email: info@bttcollege.com.

Professional Series

The Professional series of certification validates a comprehensive set of job-related skills, such as project management, system design, operations management, and planning. Demonstrate your focus on a single job role, thereby, providing a reliable indicator of on-the-job performance. Typically, a Professional Series certification requires that you pass one to three exams and have one or more technology certifications.

Choose from two Professional Series certifications, which are based on job roles:

- **Microsoft Certified IT Professional (MCITP)**

MCITP candidates are capable of deploying, building, designing, optimizing, and operating technologies for a particular job role. They make the design and technology decisions necessary to ensure successful technology implementation projects.

- **Microsoft Certified Professional Developer (MCPD)**

Validate your job-relevant skills and mastery of Microsoft Visual Studio and the Microsoft .NET Framework by becoming a Microsoft Certified Professional Developer (MCPD). This credential provides hiring managers with an unbiased indicator of your capabilities as a developer, while offering you the option to upgrade your credentials to support new releases as business needs evolve.

The Microsoft Certified Professional Developer (MCPD) credential validates a comprehensive set of skills that are necessary to deploy, build, optimize, and operate applications successfully by using Microsoft Visual Studio and the Microsoft .NET Framework. This credential is designed to provide hiring managers with a strong indicator of your potential job success.
